

CAPABILITY STATEMENT

Architectural Products. Coordinated for Construction.

Windows & Doors • Custom Joinery • Bathroom Packages

Design coordination. Manufacture. Quality control. Delivery. Installation.

INTRODUCTION

A More Coordinated Way to Build

Building or renovating a home involves hundreds of selections, suppliers and decisions.

Atelier simplifies three of the largest packages.

We specialise in **aluminium windows and doors, custom joinery and complete bathroom packages**, giving homeowners and builders one team to coordinate the products that have the greatest impact on how a home looks, functions and feels.

But we do more than supply products.

We review plans.

We understand construction.

We coordinate selections.

We prepare detailed drawings.

We manage manufacturing.

We inspect before dispatch.

We coordinate delivery.

And where required, we can arrange installation.

The result is a more considered, more coordinated and easier way to deliver the interior and architectural elements of your project.

One Team. Three Major Packages. One Coordinated Approach.

ABOUT ATELIER

Built Around the Way Projects Actually Come Together

Atelier Supply Group is an Australian building products company specialising in residential projects.

We work with homeowners, builders, architects, designers and developers to supply carefully considered architectural products without the complexity traditionally associated with managing multiple suppliers.

Our business was built around a simple observation:

A great product is only one part of a successful project.

It also needs to be properly specified, detailed, manufactured, checked, delivered and installed.

That is why Atelier approaches every project with an understanding of both **design and construction**.

We do not simply take an order and send it to a factory.

We look at the project as a whole.

Three Specialist Packages

Coordinated Through One Atelier Team

Atelier brings together three major residential product categories.

Windows & Doors

Custom aluminium window and door systems developed around the architecture, opening sizes, glazing requirements and performance needs of each project.

From sliding and stacking doors to awning, casement, fixed and feature windows, every package is prepared specifically for the home.

Custom Joinery

Project-specific cabinetry for kitchens, wardrobes, laundries, vanities, entertainment units, home offices and other areas throughout the home.

Joinery is developed around your space, appliances, storage requirements, finishes and the realities of construction.

Bathroom Packages

Complete bathroom schemes designed to simplify one of the most selection-heavy rooms in the home.

Our curated packages bring together coordinated tiles, cabinetry, tapware, mirrors, sanitaryware and fittings to create a finished bathroom without having to source every product individually.

Supply and installation options are available.

There are window suppliers. There are cabinet makers. There are bathroom stores.

Atelier was created to offer something different. We combine specialist products with the coordination and construction understanding required to make them work as part of the same project.

One Point of Contact

Instead of managing separate suppliers across windows, joinery and bathrooms, Atelier can coordinate multiple packages through one team.

Construction Knowledge

We understand that what is shown on a drawing and what ultimately gets built are not always identical. Our products are considered with real site conditions in mind.

Project-Specific Solutions

We do not believe every project should be forced into a standard solution. Windows, joinery and bathroom selections are developed around the individual home.

Detailed Before Manufacture

Where required, shop drawings and project documentation are resolved before production begins.

Quality Control

Products are checked before dispatch to reduce avoidable issues reaching site.

Managed Logistics

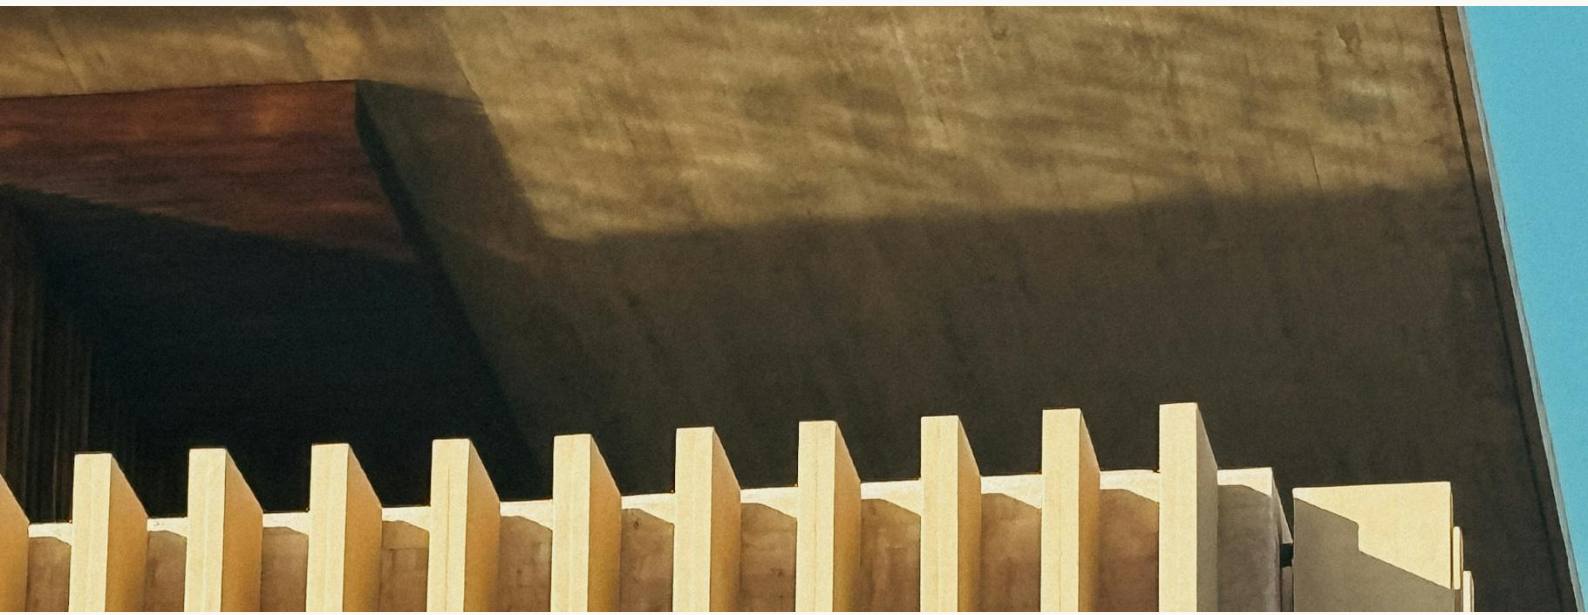

We coordinate the journey from manufacturing through to delivery in Australia.

Installation Available

Where required, Atelier can also coordinate installation, giving clients a more complete project solution.

ONE ATELIER TEAM

Windows, joinery and bathrooms, coordinated through one team from plans to delivery.

WE UNDERSTAND CONSTRUCTION

Designed for the Drawing. Considered for the Site.

Because Buildings Are Not Built to Perfect Dimensions

Architectural drawings are the starting point. Construction is the reality.

Walls can move.

Openings can vary.

Floors are not always perfectly level.

Finishes change dimensions.

Services move.

And the completed building may differ slightly from the original documentation.

Atelier understands this. It influences the way we approach every package.

WINDOWS & DOORS

We consider opening dimensions, installation clearances, surrounding construction, glazing and project performance requirements before manufacture.

JOINERY

Where appropriate, cabinetry can incorporate fillers, scribes and adjustment allowances to accommodate reasonable site variation and create a cleaner finished result.

BATHROOMS

Products and layouts are considered together so that cabinetry, tapware, sanitaryware, tiles and surrounding construction work as a coordinated package.

THE DIFFERENCE

We are not simply supplying products to match a plan.

We are helping translate the plan into something that works in the completed building.

WINDOWS & DOORS

Windows Made for the Project

More Than an Opening in the Wall

Windows influence the architecture, natural light, comfort and overall character of a home.

Atelier supplies custom aluminium window and door systems designed around the individual project.

Our team can review:

- Architectural plans
- Window schedules
- Opening configurations
- Frame systems
- Glazing requirements
- BASIX and NatHERS requirements
- Powdercoat finishes
- Hardware
- Opening sizes
- Project-specific performance requirements

Detailed shop drawings are prepared prior to manufacture where required, giving the project team an opportunity to review the package before production begins.

From large-format sliding doors to awning, casement, stacking and fixed glazing, the objective is the same:

A coordinated window package designed around the architecture rather than selected from a catalogue.

CUSTOM JOINERY

Joinery That Works With the Home

Designed for the Space. Detailed for Construction.

Beautiful joinery begins with good design. Successful joinery requires good coordination.

Atelier develops custom cabinetry around the way each room will actually be used.

We consider:

- Cabinet layouts
- Storage requirements
- Appliances
- Finishes
- Benchtops
- Hardware
- Services
- Surrounding walls and flooring
- Installation requirements

Our capabilities include:

- Kitchens
- Butler's pantries
- Walk-in wardrobes
- Built-in wardrobes
- Bathroom cabinetry
- Laundries
- Entertainment units
- Home offices
- Outdoor kitchens
- Custom architectural cabinetry

And because we understand construction, we also think about the details that are sometimes missed at the design stage.

Where appropriate, fillers, scribes and adjustment allowances can be incorporated so the joinery has the flexibility required when it reaches site.

Designed to Look Right. Detailed to Fit Right.

BATHROOM PACKAGES

The Complete Bathroom, Simplified

A Considered Room Without Hundreds of Decisions

Bathrooms can quickly become one of the most complicated rooms in a project.

Tiles · Tapware · Vanities · Mirrors · Toilets · Shower fittings · Accessories · Finishes

And every selection needs to work with everything else.

Atelier simplifies the process through a collection of carefully curated bathroom packages.

Each package brings together the major products required to create a cohesive bathroom, with colours, materials and fittings already considered as part of one design direction.

Depending on the selected package, this can include:

- Floor tiles
- Wall tiles
- Vanity and basin
- LED mirror
- Tapware
- Shower fittings
- Toilet
- Shower screen
- Bathroom accessories
- Wastes and associated fittings

Rather than selecting each item in isolation, clients can begin with a complete design direction and personalise the available options from there.

One Palette. One Package. One Clearer Decision.

A Clear Process From the Beginning

01 Send Us Your Project

Provide your plans, elevations, schedules, inspiration or project information.

02 Project Review

Our team reviews the scope and identifies the relevant windows, joinery and bathroom requirements.

03 Selection & Design

We work through systems, layouts, finishes, materials and project-specific selections.

04 Project Pricing

A tailored proposal is prepared based on the agreed project scope.

05 Detailed Coordination

We coordinate the technical and design details required before manufacture.

06 Shop Drawings & Approvals

Where applicable, detailed drawings are prepared for review and approval.

07 Manufacture

Once approved, the package moves into production.

08 Quality Control

Products are reviewed and inspected prior to dispatch.

09 Delivery

Atelier coordinates freight and delivery to the agreed project destination.

10 Installation

Where included within the project scope, installation is coordinated through experienced trade partners.

Clear Stages. Clear Responsibilities. Fewer Surprises.

QUALITY & DELIVERY

Controlled From Manufacture to Site

The Product Is Only as Good as the Process Behind It

Atelier manages more than manufacturing.

Our role extends across the supply chain to help ensure what was selected and approved is what ultimately arrives at the project.

Depending on the package, our process can include:

- Supplier coordination
- Shop drawing review
- Material and finish confirmation
- Factory quality inspection
- Packaging review
- Freight coordination
- Australian receiving
- Local delivery coordination

For builders, this provides greater visibility across the package.

For homeowners, it removes much of the complexity of managing manufacturers and logistics independently.

One Australian Team Coordinating the Process.

SUPPLY + INSTALLATION

From Supply to Completion

Need More Than the Product?

Atelier can also coordinate installation across selected project packages.

For clients who prefer a more complete solution, installation can be incorporated into the project scope through our network of experienced trade partners.

This may include:

Windows & Doors

Installation coordination subject to the project scope and location.

Custom Joinery

Assembly, installation, adjustment and finishing of the cabinetry package.

Bathroom Packages

For eligible projects, bathroom installation can be coordinated across relevant trades including cabinetry, waterproofing, plumbing, electrical and finishing works.

For builders who already have their preferred trades, our packages can also be supplied on a supply-only basis.

Flexible Enough for the Homeowner. Practical Enough for the Builder.

FOR HOMEOWNERS

Build With More Confidence

Fewer Suppliers. Fewer Decisions. More Coordination.

For homeowners, Atelier provides a simpler way to manage some of the largest selections within a new build or renovation.

Instead of approaching each package with a blank page, our team can guide you through the options and help coordinate the selections across the wider home.

You still have the freedom to create something personal.

You simply have a team helping you make the decisions.

From the colour of your window frames to your kitchen cabinetry and bathroom finishes, Atelier can help create a more consistent architectural palette throughout the home.

FOR BUILDERS

A Supplier That Understands the Site

Because Good Supply Makes Construction Easier

Builders need more than attractive products.

They need accurate information, clear approvals, reliable communication and products that arrive ready for the project.

Atelier understands the importance of:

- Working from architectural documentation
- Reviewing schedules and specifications
- Identifying project interfaces early
- Allowing for construction tolerances
- Resolving shop drawings before manufacture
- Coordinating lead times
- Quality checking before dispatch
- Planning delivery around the construction programme
- Maintaining one clear point of communication

Our objective is to become a supplier that helps the project move forward — not another package the builder has to manage.

Windows, joinery and bathrooms are traditionally purchased from completely separate businesses. But within the finished home, they sit beside one another.

The window frame relates to the cabinetry. The cabinetry relates to the flooring. The flooring relates to the bathroom. The bathroom finishes relate back to the architecture.

Atelier gives clients the opportunity to consider these packages together. This does not mean every product needs to look the same. It means every decision can be made with an understanding of what sits around it.

Windows & Doors

Customised around the architecture and project requirements.

Joinery

Designed around the room, the client and real site conditions.

Bathrooms

Curated packages that simplify selections while maintaining a considered result.

ONE ATELIER TEAM

Coordinating the details from plans through to delivery.

That is the Atelier difference.

START YOUR PROJECT

Let's Build Your Project

Whether you are planning a new home, renovation or residential development, Atelier can review your project and help determine the right approach across windows, joinery and bathrooms.

Send us your:

- Architectural plans
- Window schedules
- Interior elevations
- Inspiration
- Specifications
- Project location
- Construction programme

Our team can then review the project and prepare a tailored scope.

Start Your Project

Upload your plans or project information to request a project review and tailored proposal.
