

JOINERY

Designed for the Space. Detailed for Construction.

Custom joinery for kitchens, wardrobes, laundries, vanities and living spaces — coordinated from initial design through to manufacture, delivery and installation.

JOINERY, PROPERLY RESOLVED

More Than Cabinetry

Good joinery is not simply about selecting a colour and manufacturing cabinets to a drawing.

It needs to work with the room around it.

Walls move. Floors fall. Corners are rarely perfectly square. Services shift. Appliances change. Dimensions on architectural drawings do not always reflect the finished site.

Atelier approaches joinery with this in mind.

We combine design, technical coordination and construction understanding to develop joinery packages that are considered before they reach manufacture.

From kitchens and wardrobes to laundries, bathroom cabinetry and custom living spaces, our focus is simple:

Resolve the details early, manufacture accurately and make installation easier.

WHY CHOOSE ATELIER

Joinery Designed With the Entire Project in Mind

Atelier provides more than a manufactured joinery package.

Our team considers how the cabinetry will interact with the architecture, appliances, services, finishes and actual site conditions before production begins.

WHAT SETS US APART

Construction-Aware Detailing

We understand that completed construction rarely reflects drawings perfectly. Joinery is detailed with appropriate tolerances, fillers, scribes and adjustment zones where required.

Detailed Shop Drawings

Cabinetry is documented and coordinated before manufacture, giving clients the opportunity to review layouts, dimensions and key details before production.

Project-Specific Manufacturing

Every package is manufactured around the individual project rather than adapted from standard cabinet sizes.

Coordinated Material Selection

Cabinetry finishes, benchtops, hardware and surrounding materials can be considered together to create a cohesive result.

Factory Quality Control

Joinery is reviewed prior to dispatch to reduce avoidable issues reaching site.

Installation Available

Atelier can coordinate installation through experienced installation partners, providing clients with a more complete project solution.

WE UNDERSTAND CONSTRUCTION

Designed for Real Site Conditions

Because Homes Are Not Built to Perfect Dimensions

One of the biggest differences between good joinery and problematic joinery is how well it accommodates the actual building.

A wall shown as straight on a drawing may not be straight once constructed.

A room dimension may vary once plasterboard, tiles, flooring and finishes are installed.

A ceiling may not be perfectly level.

An opening may differ from the architectural plan.

For this reason, Atelier does not treat architectural dimensions as the only consideration when preparing joinery.

Where appropriate, our detailing may incorporate:

- Filler panels
- Scribe panels
- Adjustable margins
- End panels
- Shadow lines
- Service voids
- Appliance clearances
- Installation tolerances
- Finished wall and floor build-ups

These details allow installers to accommodate reasonable construction variation while maintaining a clean finished appearance.

Designed on Paper. Resolved for Site.

The objective is not simply to manufacture cabinetry that matches a drawing.

It is to manufacture cabinetry that can be successfully installed into the completed building.

PROJECT COORDINATION

Every Detail Has to Work Together

Joinery Does Not Sit in Isolation

Cabinetry interfaces with almost every other element within a room.

That is why Atelier considers the wider project when developing the joinery package.

Depending on the project, coordination may include:

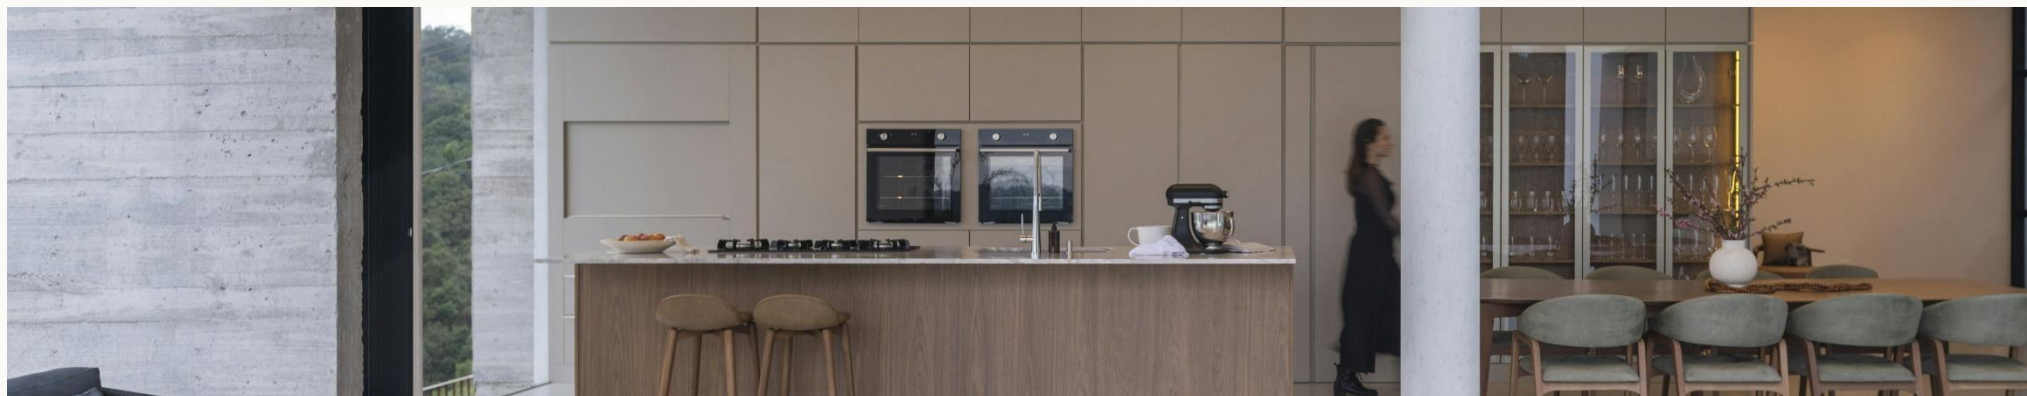

- Appliances and appliance specifications
- Plumbing locations
- Electrical requirements
- Benchtops and splashbacks
- Sink and basin locations
- Tapware
- Flooring
- Wall finishes
- Door openings
- Bulkheads and ceilings
- Handles and hardware
- Lighting integration
- Architectural finishes

By resolving these interfaces before manufacture, we help reduce compromises and unnecessary changes during installation.

From Plans to Completed Joinery

A Clear Process From the Beginning

01

Project Review

Send us your architectural plans, elevations, inspiration and project requirements. Our team reviews the proposed spaces, cabinetry requirements and available project information.

02

Design & Selections

We work through the cabinetry configuration, internal requirements, finishes, hardware, appliances and key design selections.

03

Project Pricing

Once the scope is understood, Atelier prepares a project-specific proposal outlining the joinery package.

04

Site & Technical Coordination

Dimensions, construction conditions, appliances, services and interfaces are reviewed before final documentation.

05

Shop Drawings

Detailed shop drawings are prepared for client review and approval prior to manufacture.

06

Manufacture

Following approval, the joinery package moves into production.

07

Quality Control

The manufactured package is checked prior to dispatch.

08

Delivery & Installation

Joinery is delivered to the project, with installation available where included within the project scope.

SHOP DRAWINGS

Resolved Before Manufacture

See the Joinery Before It Is Built

Manufacturing should begin only after the important decisions have been resolved.

Our shop drawing process provides an opportunity to review the joinery before production, helping identify issues while they can still be addressed efficiently.

Depending on the project, shop drawings may document:

- Cabinet dimensions
- Elevations
- Cabinet configurations
- Door and drawer layouts
- Internal storage
- Appliance locations
- End panels and fillers
- Benchtop interfaces
- Hardware positions
- Construction details
- Material and finish references

One Important Rule

Each stage is resolved before the next begins.

This structured approach reduces ambiguity and gives both the client and manufacturing team a clear set of approved information to work from.

MATERIALS & FINISHES

Made Around Your Interior

A Joinery Palette That Works Across the Home

Your cabinetry should feel connected to the architecture around it.

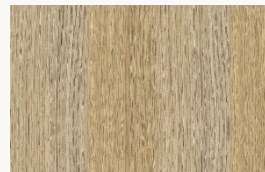

Atelier offers a carefully considered selection of materials, colours, textures and hardware options suited to contemporary Australian interiors.

Depending on the project, selections can include:

- Woodgrain finishes
- Solid colours
- Two-pack polyurethane finishes
- Laminates
- Feature cabinetry finishes
- Stone and engineered surfaces
- Handles and pulls
- Handleless profiles
- Internal accessories and storage systems

Our team can assist in coordinating the cabinetry against surrounding flooring, stone, tapware, appliances and architectural finishes.

The result is a joinery package that feels intentional rather than assembled one selection at a time.

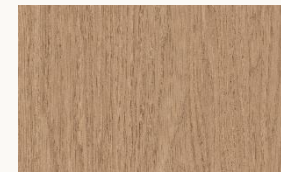

Yarra Oak

Daintree Walnut

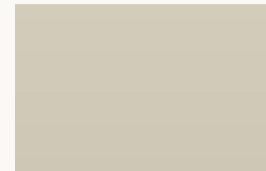

Bronte Oak

Hunter Oak

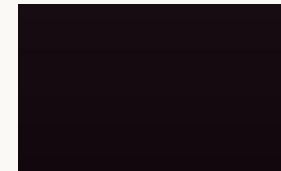

Classic White

Greige

Stone Grey

Black

A selection from the Atelier Joinery Colour & Finish Collection. Woodgrain and solid finishes are shown in the full collection card.

Joinery Throughout the Home

One Approach. Multiple Spaces. · Atelier can coordinate custom cabinetry across multiple areas of the project, creating continuity in design, materials and detailing.

Kitchens

Custom kitchens designed around appliances, storage and daily use.

Butler's Pantries

Functional secondary preparation and storage spaces coordinated with the main kitchen.

Walk-In Wardrobes

Custom wardrobe systems tailored around the available space and storage requirements.

Bathroom Cabinetry

Vanities, shaving cabinets and storage designed to coordinate with the bathroom palette.

Laundries

Practical cabinetry designed around appliances, sinks, services and storage.

Entertainment Units

Integrated cabinetry for televisions, media, storage and display.

Home Offices

Built-in desks, storage and shelving designed around the way the space will be used.

Outdoor Kitchens

Purpose-designed cabinetry solutions for covered outdoor entertaining areas.

QUALITY CONTROL

Quality Before Dispatch

Problems Are Easier to Solve Before They Reach Site

Our objective is to identify issues as early as possible.

Before dispatch, the joinery package is subject to factory quality control appropriate to the project scope.

Checks may include:

- Cabinet dimensions
- Component quantities
- Finish and colour consistency
- Visible damage
- Door and drawer alignment
- Packaging
- Hardware
- Approved shop drawing references

Joinery is then prepared and packed for transport to Australia.

From Factory to Project

Atelier coordinates the supply chain through manufacture, quality control, freight and local delivery, giving clients one point of contact throughout the process.

INSTALLATION

Supply + Installation

A Complete Joinery Solution

For clients looking for a more complete service, Atelier can also coordinate joinery installation.

Our installation partners understand flat-packed and project-specific cabinetry and work from the approved joinery documentation to assemble, position and finish the cabinetry on site.

Installation can include, depending on the agreed project scope:

- Cabinet assembly
- Cabinet positioning and levelling
- Fixing and installation
- Filler and scribe adjustments
- Door and drawer adjustment
- Panel installation
- Hardware installation
- Final cabinetry alignment

By combining supply and installation, responsibility remains clearer and the transition from manufacture to completed joinery becomes easier to manage.

Prefer Supply Only?

Atelier can also provide joinery on a supply-only basis for installation by your builder or nominated joiner.

PROJECT SELECTION

Your Joinery. Your Project.

Start With Your Plans

Every project begins differently.

You may already have completed architectural drawings and interior selections, or you may only have a floor plan and an idea of how you want the space to feel.

Either way, our team can help develop the joinery package from there.

Send Atelier your:

- Architectural plans
- Interior elevations
- Joinery drawings, if available
- Appliance selections
- Inspiration images
- Preferred finishes
- Project location
- Construction programme

From there, we can review the project and assist with cabinetry design, finishes, technical coordination, shop drawings, manufacturing, delivery and installation.

Start Your Joinery Project

Upload your plans or project information to request a project review and tailored quotation.
